Contents

1. Introduction 1-1
   1.1. Describing Structure 1-2
   1.2. Describing Behaviour 1-2
   1.3. Discrete Event Time Model 1-3
   1.4. A Quick Example 1-3

2. VHDL is Like a Programming Language 2-1
   2.1. Lexical Elements 2-1
      2.1.1. Comments 2-1
      2.1.2. Identifiers 2-1
      2.1.3. Numbers 2-1
      2.1.4. Characters 2-2
      2.1.5. Strings 2-2
      2.1.6. Bit Strings 2-2
   2.2. Data Types and Objects 2-2
      2.2.1. Integer Types 2-3
      2.2.2. Physical Types 2-3
      2.2.3. Floating Point Types 2-4
      2.2.4. Enumeration Types 2-4
      2.2.5. Arrays 2-5
      2.2.6. Records 2-7
      2.2.7. Subtypes 2-7
      2.2.8. Object Declarations 2-8
      2.2.9. Attributes 2-8
   2.3. Expressions and Operators 2-9
   2.4. Sequential Statements 2-10
      2.4.1. Variable Assignment 2-10
      2.4.2. If Statement 2-11
      2.4.3. Case Statement 2-11
      2.4.4. Loop Statements 2-12
      2.4.5. Null Statement 2-13
      2.4.6. Assertions 2-13
   2.5. Subprograms and Packages 2-13
      2.5.1. Procedures and Functions 2-14
      2.5.2. Overloading 2-16
      2.5.3. Package and Package Body Declarations 2-17
      2.5.4. Package Use and Name Visibility 2-18

Contents (cont'd)

3. VHDL Describes Structure 3-1
3.1. Entity Declarations 3-1
3.2. Architecture Declarations 3-3
3.2.1. Signal Declarations 3-3
3.2.2. Blocks 3-4
3.2.3. Component Declarations 3-5
3.2.4. Component Instantiation 3-6

4. VHDL Describes Behaviour 4-1
4.1. Signal Assignment 4-1
4.2. Processes and the Wait Statement 4-2
4.3. Concurrent Signal Assignment Statements 4-4
4.3.1. Conditional Signal Assignment 4-5
4.3.2. Selected Signal Assignment 4-6

5. Model Organisation 5-1
5.1. Design Units and Libraries 5-1
5.2. Configurations 5-2
5.3. Complete Design Example 5-5

6. Advanced VHDL 6-1
6.1. Signal Resolution and Buses 6-1
6.2. Null Transactions 6-2
6.3. Generate Statements 6-2
6.4. Concurrent Assertions and Procedure Calls 6-3
6.5. Entity Statements 6-4

7. Sample Models: The DP32 Processor 7-1
7.1. Instruction Set Architecture 7-1
7.2. Bus Architecture 7-4
7.3. Types and Entity 7-6
7.4. Behavioural Description 7-9
7.5. Test Bench 7-18
7.6. Register Transfer Architecture 7-24
7.6.1. Multiplexor 7-25
7.6.2. Transparent Latch 7-25
7.6.3. Buffer 7-26
7.6.4. Sign Extending Buffer 7-28
7.6.5. Latching Buffer 7-28
7.6.6. Program Counter Register 7-28
7.6.7. Register File 7-29

Contents (cont'd)

7.6.8. Arithmetic & Logic Unit 7-30
7.6.9. Condition Code Comparator.....7-34
7.6.10. Structural Architecture of the DP32 7-34
